

Smart Metering Pre-Sampling is Here. Are you Prepared to RISK your Investment? Get Informed!

Pre-Sampling under S-S-06 gives greater confidence and integrity to the lot, as well as mitigating RISK from heavy fines from MC should the lot fail without pre-sampling.

All utilities need to pre-sample Smart Meters before seal expiry to ensure meter accuracy and show due diligence under S-S-06.

Failure of LDC's to comply could result in heavy fines from Measurement Canada (previously under Bill C-14), which could result in fines of \$1000 per meter in the Lot!

Pre-Sampling Management

- ECALIBER has developed a sampling process to ensure your Utility complies with S-S-06
- ECALIBER will assess and monitor your entire meter population for the duration of the meter lot and liaison with Measurement Canada on your behalf
- We will monitor each lot to optimize meter seal life
- We assist in monitoring Time On Test
- ECALIBER ensures that each meter lot attains maximum seal life SAVING YOU MONEY
- ECALIBER will monitor and inform all you of Measurement Canada updates that may effect your sampling program

Example: If a utility has 20 meter sample lots and each lot is pre-sampled three times, you actually have 60 meter lots to track with multiple levels coming due each year.

MINIMIZE THE RISK! Make the SMART choice.

Pre Compliance Sampling.

Accredited Meter Verification with ECALIBER.
